PROJECTS

- **Travel Guide** is an application that can be used in any browser available. Travel Guide can provide tourists a UAE map and help in guidance finding the location of restaurants, current weather, and 5 days weather forecast in the UAE.
- **Weather Dashboard API** is an application that retrieve weather data for cities and retrieve five day's forecast data as well.
- **Team Profile Generator** It's a software engineering team generator command-line application. The application will prompt the user for information about the team manager and then information about the team members. The user can input any number of team members, and they may be a mix of engineers and interns. This application will pass all unit tests. When the user has completed building the team, the application will create an HTML file that displays the team's information based on the user's entry.
- **Note Taker** It's an application that helps the user create, save a note, and update it later.
